

CRITICAL CONTROL ANNOUNCES WEBCADA UPGRADE AND CLIENT ADOPTION

CALGARY, ALBERTA, July 16, 2015 – Critical Control Energy Services Corp. (“Critical Control” or the “Corporation”) (TSX: CCZ) announced the release of the next generation of its proprietary webSCADA platform “NetFlow”, incorporating visualization whereby available data from devices integrated into NetFlow in the field can be displayed to the user within an interconnected diagram of the client’s assets in a particular area.

“The addition of visualization to NetFlow bridges one of the main gaps between webSCADA and the more expensive but highly customizable server and desktop based SCADA systems,” said Alykhan Mamdani, President and CEO of Critical Control. “Tabular data can now be integrated into a customizable diagram providing relevant context to the data and empowering the client to better understand the implications of what is happening in the field from any web browser.”

The new upgrade is available immediately for all NetFlow customers. NetFlow continues to be cloud based, with each visualization graphic being customizable for each customer, saved within the user’s profile and displayed from any web browser the user logs in from. For more information on NetFlow, please see www.criticalcontrolenergy.com/netflow.

In addition, a multinational integrated energy company (the “New Customer”) has selected NetFlow for multiple fields within their Canadian operations, signing a five year agreement with Critical Control. The New Customer is expected to bring on 285 wells onto NetFlow in the next 90 days.

"Our continued success in this economic climate is a testament to our product innovation and customer service," said Alykhan Mamdani.

Forward Looking Statement

Management’s expectation on the number and timing of wells to be added to NetFlow by the New Customer is a forward looking statement based on information provided by the New Customer to Critical Control. The actual number and timing of wells added to NetFlow may vary based on changes to the needs of the New Customer.

About Critical Control

Critical Control provides solutions for the collection, control and analysis of measurement and operational data related to oil and gas wells across North America. We provide services to capture the data, cloud-based software to visualize and manage it and the business intelligence to make quicker and more informed operational decisions.
